LATEX Tutorial

Lingchao Meng

School of Economics Peking University

April 26, 2020

1/53

This is just a beginner guide to writing documents in LATEX without prior knowledge of LATEX. This slide is designed for the LATEX workshop at School of Economics, Peking University.

2/53

This file and some other materials can be download from my GitHub repository: https://github.com/MengLingchao/LaTex_tutorial.

Please feel free to download and use it.

If you want, you can also star it!

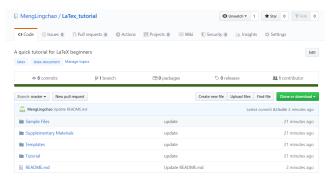

Figure 1: GitHub Repository

Outline

- Introduction
- LATEX Basic
- Basic Typesetting
- 4 Equations
- Tables and Figures
- 6 Bibliography
- Conclusion

Introduction

What's LATEX?

LATEX (pronounced either "Lay-tech" or "Lah-tech")

- is based on TEX, a typesetting system designed by Donald Knuth in 1978 for high quality digital typesetting.
- is a typesetting system and programming language, not a word processor.

```
This is \textbf{my} \emph { first } document prepared in \LaTeX. I \underline{typed} it on \today.
```

This is **my** *first* document prepared in LATEX. I <u>typed</u> it on April 26, 2020.

Why LATEX?

- Donald Knuth says that his aim in creating TEX is to beautifully typeset technical documents especially those containing a lot of Mathematics.
- Most English journals have their own LaTEX template or accept LATEX submission. LATEX is widely used in English paper writing.
- Even for ordinary text, LATEX is also a good choice.

Installation

On Windows, users have two main choices of TeX system to install: TeX Live or MiKTeX. I highly recommend Tex Live for the following reasons

- The standard installer for MiKTeX installs 'just the basics' and uses on-the-fly installation for anything else you need; the standard install for TeX Live is 'everything' (about 4.5 Gb!).
- Real-time updates.
- Faster compilation (especially in case of graphics files)

Installation

There are many different editors of LATEX.

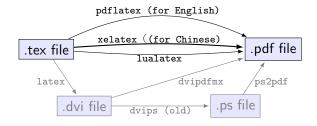

- professional LATEX editors, such as TeXstudio, TeXwork.
- edit LATEXfiles using Vim, Sublime Text, Visual Studio Code, etc.
- For more comparison of LaTeX, you can refer to https://en.wikipedia.org/wiki/Comparison_of_TeX_editors

Recommend Tex Live with TexStudio, you can refer to https://blog.csdn.net/zywhehe/article/details/83113214.

Aside: you may change the default compiler to pdfLaTeX through Options-Configure TeXstudio-Build

From .tex file to .pdf file

Installation

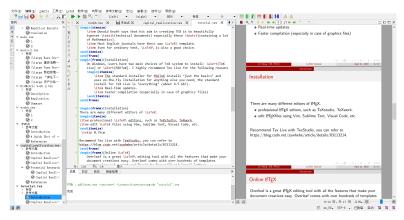

Figure 2: TeXstudio

Online LATEX

Overleaf(https://www.overleaf.com/) is a great LATEX editing tool with all the features that make your document creations easy. Overleaf comes with over hundreds of templates ranging from Lab report and Thesis to Resume/CV and formal letters.

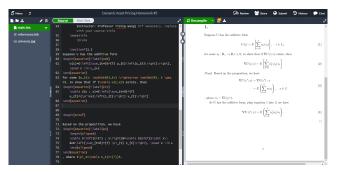

Figure 3: Overleaf website

LATEX Basic

The basic structure of a LATEX file

- The documentclass command: define the property of the file
 - article, beamer, report, thesis, letter, book
- Preamble
 - include the packages: \usepackage{package}
 - format the article.
- Begin and end of the document: the main body of the file.

```
\documentclass[options]{article}
Preamble (for LATEX commands only)
\begin{document}
Document text (text with embedded LATEX commands)
\end{document}
```

Document Structure

LATEX is extremely suitable for *well-structured* article.

- ① Title: \title{} \author{} \date{}... ⇒ \maketitle
- Abstract: \begin{abstract}...\end{abstract}
- Ontents: \tableofcontents
- Sections: \section \subsection...
- Appendix: \appendix
- References: \bibliography{}

Document Structure

LATEX can organize, number, and index chapters and sections of document. There are up to 7 levels of depth for defining sections depending on the document class

- \part{title}: the highest level
- ② \chapter{title}: the highest level of report, book class
- ③ \section{title}: the highest level of article
- 4 \subsection{title}
- 5 \subsubsection{title}
- o \paragraph{title}: not numbered
- \subparagraph{title}: not numbered

LATEX vocabulary

- **Commands**: produce text or space, like \textit{it}.
- **Declarations**: affect the following text, like \Large or {\Large }.
- Environments: receive special processing and are defined by \begin{name} ... \end{name}.
- Mandatory arguments: are included in braces, like \hspace{2in}.
- Optional arguments: are enclosed in brackets [], like \documentclass[11pt]{article}.
- *: indicates a variation on a command or environment.

Basic Typesetting

Basic Typesetting

- Simply enter your content in most times, just like using word or txt.
- When you need to start a new paragraph, add \par in the end or empty one line between two paragraphs.

```
The first paragraph.\par
The second paragraph.

The third paragraph.
```

The first paragraph.
The second paragraph.
The third paragraph.

Font effects

There are LATEX commands for a variety of font effects:

```
1  \textbf{hello world}
2
3  \textit{hello wolld}
4
5  \underline{hello world}
6
7  \textsc{hello world}
8
9  \textrm{hello world}
```

hello world

hello world

nello world

HELLO WORLD hello world

Colored text

- Include the xcolor package in the preamble by \usepackage{xcolor}.
- Also can define customized color, such as \definecolor{myred}{RGB}{231, 76, 60}.

```
textcolor{red}{Red}
textcolor{gray}{Gray}
textcolor{myred}{Myred}
```

Red Gray Myred

Font size

- The global font size can be set by the documentclass option.
- The local font size can be changed by the following commands.

```
{\tiny tiny}\\
{\scriptsize scriptsize}
{\footnotesize
    footnotesize } \\
{\small small}\\
{\normalsize normalsize}
{\large large}\\
{\Large Large}\\
{\LARGE LARGE}\\
{\huge huge}\\
{\Huge Huge}
```

```
tinv
scriptsize
footnotesize
small
normalsize
large
Large
LARGE
huge
```

Lists

• Lack supports two types of lists: *enumerate* produces numbered lists, while *itemize* is for bulleted lists. Each list item is defined by \item. Lists can be nested to produce sub-lists.

```
begin{enumerate}

item First thing

item Second thing

begin{itemize}

item A sub—thing

item[—] Another sub—
thing

end{itemize}

item[(3)] Third thing

end{enumerate}
```

- First thing
- Second thing
 - A sub-thing
 - Another sub-thing
- (3) Third thing

Comments

• LATEX Comments are created using %. When LATEX encounters a % character while processing a .tex file, it ignores the rest of the line.

%comments 1
The following is comments 2. % comments 2

The following is comments 2.

Special characters

Equations

Mathematical modes

LATEX allows two writing modes for mathematical expressions: the *inline* mode and the display mode. The first one is used to write formulas that are part of a text. The second one is used to write expressions that are not part of a text or paragraph, and are therefore put on separate lines.

- Inline mode: use \$equation\$ or \((equation\))
- Display mode: use \$\$equation\$\$ or \[equation\]

```
Inline mode: a = b + c or a = b + c
Display mode: a = b + ca = b + c
```

27 / 53

Equation Environment

- Another useful mode is the *equation environment*, which support the numbered equation and the reference.
- The reference can achieved through \label{} and \ref{}. The reference of the equation, table and figure are all the same.

```
An example
| begin { equation } \label { eq | : myeq } |
| E=MC^2 |
| tend { equation } |
| Equation | \text{ref } { eq : myeq } | | | | |
| tend | tend | tend | tend |
| tend | tend | tend | tend |
| tend | tend | tend | tend |
| tend | tend | tend | tend |
| tend | tend | tend |
| tend | tend | tend | tend |
| tend | tend | tend | tend |
| tend | tend | tend | tend |
| tend | tend | tend | tend |
| tend | tend | tend | tend |
| tend | tend | tend | tend |
| tend | tend | tend | tend |
| tend | tend | tend | tend | tend |
| tend | tend | tend | tend | tend |
| tend | tend | tend | tend | tend |
| tend | tend | tend | tend | tend | tend |
| tend |
| tend |
| tend | te
```

An example

$$E = MC^2 \tag{1}$$

Equation 1 is mass-energy equivalence.

Subscripts and Superscripts

Subscripts and superscripts are written using the symbols _ and ^.

$$a_1^2 = b_1^2 + c_1^2$$

 $a_m n^2 = b_m n^2$
 $a_{mn}^2 = b_{mn}^2$

Fractions

- To enable the fraction, you need to include the *amsmath* package, a powerful math package.
- \frac{numerator}{denominator}.

$$a_1 = \frac{b_1}{c_1}$$

Brackets and Parentheses

- Use to \left and \right command to set dynamically resized brackets and parentheses.
- Even if you are using only one bracket, both commands are mandatory.

$$U_{t} = \left((1 - \delta) \frac{A}{C} + \delta B \right)^{\frac{1}{1 - \sigma}}$$

$$U_{t} = \left((1 - \delta) \frac{A}{C} + \delta B \right)^{\frac{1}{1 - \sigma}}$$
(A

Aligning equations

 Amsmath package and \begin{aligned}...\end{aligned} environment.

```
\begin{equation}
2 \begin{aligned}
 \frac{\partial U t}{
     \partial A \&=(1-
      \delta)U t^{\frac
      \{1\}\{1-\langle sigma^{-1}\}\}-1\}
      A^{-\sigma}_{-\sigma}^{-1}
 \frac{\partial U t}{
    \partial B\&=\delta U
      t^{\frac{1}{1-sigma}}
      {-1}}-1B{-1}B{-1}
     ^{-1}
  \end{aligned}
  \end{equation}
```

Special symbols

- Integrals, sums and limits.
- Greek letters.
- math symbols.

```
\alpha
\beta
\int_{a}^{b} x^{2} dx
\lim_{x \to \infty} f(x)
\uparrow \to \downarrow \leftarrow
```

Special symbols

Some trickier equations(not just math)

```
\begin { equation } \begin {
       aligned }
\oint \mathbf{B} \cdot d
      \mathbb{S} \ \( \mathbf{S} \&=\mu \ \{0\}
      \epsilon_{0} \frac{d}
      \Phi \ E}{dt}+\mu
      _{0} i_{e n c} \
                                                      \oint \mathbf{B} \cdot d\mathbf{S} = \mu_0 \epsilon_0 \frac{d\Phi_E}{dt} + \mu_0 i_{enc}
|K_{a} &= frac \{ | fft |
      K_a = \frac{\left[\mathrm{H_30^+}\right]\left[\mathrm{A^-}\right]}{\left[\mathrm{H_A}\right]}
      \right]\left[\mathrm{
      A}^{-}\right]}{[
      \mathrm{HA}]} \\
                                                            V = \left(\bigoplus_{\lambda \in Sor(T)} V^{(\lambda)}\right) \oplus V
V &=\left(\bigoplus_{
      \lambda \in
       \operatorname { Sec } (T)
       } V^{(\lambda)}\right
       ) \oplus V
```

Figure 4: Online Equation Editor

Tables and Figures

Figures

- First include the graphicx package.
- Images should be EPS, PDF, PNG, JPEG or GIF files.

Figure 5: new york

Figures

- **() [h]** is the placement specifier. put the figure approximately here.
 - Other options are **t**(at the top of the page), **b**(at the bottom of the page) and **p**(on a separate page for figures).
- \centering centres the image on the page, if not used images are left-aligned by default.
- includegraphics{...} is the command that actually puts the image in your document. The image file should be saved in the same folder as the .tex file.
- [width=0.7\textwidth]. is an optional command that specifies the width of the picture in this case the same width as the text. The width could also be given in centimeters (cm).
- ♦ \label{...} creates a label to allow you to refer to the table or figure in your text.

Figures

- **() [h]** is the placement specifier. put the figure approximately here.
 - Other options are t(at the top of the page), b(at the bottom of the page) and p(on a separate page for figures).
- \centering centres the image on the page, if not used images are left-aligned by default.
- \label{...} creates a label to allow you to refer to the table or figure in your text.

Tables

Tablular environment is used to typeset basic tables.

- The braces after \begin{tabular} defines the columns.
 - I for a column of left-aligned text.
 - r for a column of right-aligned text.
 - c for a column of center-aligned text.
 - | for a vertical line.

Tables

Tablular environment is used to typeset basic tables.

- The table data follows the \begin command:
 - & is placed between columns.
 - \\ is placed at the end of a row to start a new one.
 - \hline inserts a horizontal line.
 - \cline{1-2} a partial horizontal line between column 1 and column 2.

```
begin{tabular}{|rc}
Apples & Green \\
Apples & Green \\

hline
Strawberries & Red
\\
cline{1-1}
Oranges & Orange \\
end{tabular}
```

```
Apples Green
Strawberries Red
Oranges Orange
```

Sample Tables

```
\begin{table}[]
   \caption{Persistence of ***}
    \begin{threeparttable}
       \label{tab:persistence}
       \centering
       \scriptsize
       \resizebox{\textwidth}{!}{%
            \begin{tabular}{lccccc}
               \hline
               \multicolumn{1}{c}{n-year-ahead} & Univariate Predictive & & Controlling for & & Controlling for \\
               \multicolumn{1}{c}{$\beta^{***}}} & Regressions & & Lagged $\beta^{MKT}$, $\beta^{SMB}$
               and $\beta^{HML}$ \\ \hline
               n=1 & 0.7660*** & & 0.7467*** & & 0.7476*** \\
               & (24.66) & & (25.14) & & (25.96) \\
               n=2 & 0.5626*** & & 0.5304*** & & 0.5360*** \\
               & (15.26) & & (14.56) & & (15.43) \\
               n=3 & 0.3801*** & & 0.3441*** & & 0.3560*** \\
               & (10.50) & & (9.49) & & (10.20) \\
               n=4 & 0.2031*** & & 0.1832*** & & 0.1868*** \\
               & (5.65) & & (5.46) & & (5.91) \\
               n=5 & 0.0441 & & 0.0487* & & 0.0368 \\
               & (1.39) & & (1.82) & & (1.59) \\ \hline
            \end{tabular}%
       \begin{flushleft}
           This table tests the persistence of *** by running Fama and MacBeth Regression on n-year ahead$\beta^{***}$ on current
           $\beta^{***}$. The first column reports the average slope coefficients on $\beta^{GPR}$ from the univariate predictive
           regression. The second column reports the results after controlling $\beta^{MKT}$, and the third column reports the
           results after controlling $\beta^{MKT}$. $\beta^{SMB}$ and $\beta^{HML}$. Newey-West adjusted $t$-statistic are given in
           parentheses. $*$, $**$, and $***$ indicate the significance at the 10\%, 5\% and 1\% levels, respectively. The sample
           period is January 1980-December 2018.
       \end{flushleft}
   \end{threeparttable}
\end{table}
```

Figure 6: Sample Table Code

Sample Table

Table 1: Persistence of ***

n-year-ahead	Univariate Predictive	Controlling for	Controlling for
β^{***}	Regressions	Lagged β^{MKT}	Lagged β^{MKT} , β^{SMB} and β^{HML}
n=1	0.7660***	0.7467***	0.7476***
	(24.66)	(25.14)	(25.96)
n=2	0.5626***	0.5304***	0.5360***
	(15.26)	(14.56)	(15.43)
n=3	0.3801***	0.3441***	0.3560***
	(10.50)	(9.49)	(10.20)
n=4	0.2031***	0.1832***	0.1868***
	(5.65)	(5.46)	(5.91)
n=5	0.0441	0.0487*	0.0368
	(1.39)	(1.82)	(1.59)

This table tests the persistence of *** by running Fama and MacBeth Regression on n-year ahead β^{***} on current β^{***} . The first column reports the average slope coefficients on β^{GPR} from the univariate predictive regression. The second column reports the results after controlling β^{MKT} , and the third column reports the results after controlling β^{MKT} , β^{SMB} and β^{HML} . Newey-West adjusted t-statistic are given in parentheses. *, **, and *** indicate the significance at the 10%, 5% and 1% levels, respectively. The sample period is January 1980-December 2018.

Bibliography

How to cite literature in LATEX

The BibTeX file is the key file.

- .bib file contains contains all the references you want to cite in your document.
- It should be kept in the same folder as your .tex file.
- It can be edited using Notepad or LATEX editor.
- the bibtex reference can be downloaded from Google Scholar, Baidu Xueshu, or exported by EndNote, Mendeley, et.al.

```
@article(cochrane2011presidential, title=(Presidential address: Discount rates), author=(Cochrane, John H), journal=(The Journal of finance), volume=(66), number=(4), pages=(1047--1108), year=(2011), publisher={Wiley Online Library}
```

Figure 8: BibTeX sample

How to cite literature in LATEX

The .bst file is another file.

- .bst file is the reference style file.
- one can use .bst file to edit his customized reference style or use some journal-specific style.
- Include the name of the .bst file in the \bibliographystyle{...}
 commmand.

BibTeX Sample

- \cite{jiang2019manager} constructs a manager sentiment index based on the aggregated textual tone of corporate financial disclosures.
- \bibliographystyle{jf}
- \bibliography{ref}

Jiang, Lee, Martin, and Zhou (2019) constructs a manager sentiment index based on the aggregated textual tone of corporate financial disclosures.

Jiang, Fuwei, Joshua Lee, Xiumin Martin, and Guofu Zhou, 2019, Manager sentiment and stock returns, *Journal of Financial Economics* 132, 126–149.

Conclusion

Why LATEX?

- LATEX allows you to concentrate on the content and the structure.
- LATEX has one of the most advanced math typesetting systems around.
- LATEX is incredibly extendible.
- LATEX keeps track of references so you don't have to.
- LATEX allows you to make more consistent, and more easily changeable, documents
